

SEO Performance Analysis Report

1. Executive Summary

This analysis evaluates BigSports' organic search performance across four key markets (EN, IT, BR, FR). While the brand shows strong traction in the **Italian (IT)** and **English (EN)** markets, serious technical SEO issues—specifically **URL/Country mismatches**—are likely hindering growth. Immediate remediation of these technical flaws, combined with targeted content updates for "La Liga" and "NBA" clusters, presents the biggest opportunity for traffic growth.

2. Data Quality & Integrity

Before analyzing performance, the dataset was audited for quality. Two critical issues were flagged:

- **Critical URL Mismatch (74% of data):** A significant number of keywords ranking in a specific country (e.g., Italy) are served by a page URL targeting a different country (e.g. EN or FR). This indicates a severe **Hreflang** or site architecture issue causing incorrect geographical targeting.
- **Tracking Anomalies:** 6 rows showed that Clicks > Impressions (CTR > 100%), which is impossible. These were treated as data errors.

3. Market Performance Analysis

- **Most Efficient Market: Italy (IT).** Despite having lower search volume (1.2M) than English (1.5M), Italy generates the highest number of clicks (**78.5k** vs 69.9k). The CTR in Italy (11.4%) is also superior to the English market (10.0%), suggesting strong brand affinity or weaker competition.
- **Largest Potential: English (EN)** remains the largest addressable market by search volume (1.5M monthly searches), but our capture rate (CTR) is lower here.
- **Top Keywords:**
 1. **MMA results** (22.7k clicks)
 2. **NFL highlights** (19.7k clicks)
 3. **La Liga standings** (18.9k clicks)

- **Visual 1: Market Potential** *This chart compares the total search volume available vs actual clicks captured.*

- **Visual 2: Top Keywords** *Top 5 traffic-driving keywords across all markets.*

4. Growth Opportunities

I identified "Low Hanging Fruit"—keywords with high search volume (> median) where we rank poorly (Position > 5). Improving these rankings would yield the highest ROI.

- **Priority 1: La Liga Standings:**
 - **FR Market:** 97k Volume, Ranking #18.6
 - **BR Market:** 97k Volume, Ranking #10.8
 - **Action:** These are high-volume keywords on page 2. Content consolidation and internal linking updates could push these to page 1.
- **Priority 2: Best Bookmakers (IT):**
 - **IT Market:** 94k Volume, Ranking #19.6
 - **Action:** This is a high-value "money" keyword. The current ranking suggests the page might be thin on content compared to competitors.

Visual 3: Opportunity Matrix Keywords in the bottom-right quadrant (High Volume, Poor Rank) are the primary targets.

5. Competitor Analysis

I analyzed gaps where competitors rank in the top 10 while BigSports ranks poorly (>20).

- **Biggest Gaps:**
 - **NBA Playoffs (FR):** Competitor Rank #4.1 vs. Our Rank #27.0.
 - **Cricket Live Updates (BR):** Competitor Rank #8.0 vs. Our Rank #27.9.
 - **Best Bookmakers (IT):** Competitor Rank #1.0 vs. Our Rank #19.6.

6. Strategic Recommendations For Business

1: Fix Critical Technical SEO Issues:

- **The Issue:** 74% of your ranking pages have a URL/Country mismatch (e.g., an EN page ranking for a keyword in **Italy**). This confuses search engines and impacts user experience.
- **Recommendation:**
 - **Implement Hreflang Tags:** Ensure Google knows exactly which URL version (EN, IT, FR, BR) to show in which country.
 - **Audit Redirects:** Verify that users are not being forced to English pages due to faulty geo-redirection scripts.
 - **Impact:** Immediate improvement in local ranking signals and conversion rates (users see content in their own language).

2: Capitalize on "Low-Hanging Fruit" (High ROI)

- **The Issue:** You have high-volume keywords ranking on the top of Page 2 (Positions 6–20), meaning you are close to significant traffic but missing the click-throughs.
- **Recommendation:** Focus immediate content optimization efforts on:
 - **"La Liga Standings" in France & Brazil** (~194k combined volume, ranking #11–19). Add depth to these pages (e.g., team stats, history, live tables) and build internal links to push them into the Top 5.
 - **"Best Bookmakers" in Italy** (94k volume, ranking #20). This is likely a high-revenue keyword. Competitors rank #1. Audit the #1 competitor's page and match their content depth.
 - **Impact:** Moving these from Page 2 to Page 1 can triple traffic for these specific terms without creating new content from scratch.

3: Resolve Content Mismatches

- **The Issue:** Heuristic analysis showed keywords ranking for irrelevant pages (e.g., *"F1 results"* ranking for a *"tennis-live-score"* URL).
- **Recommendation:**
 - **Content Audit:** Identify these mismatches.
 - **301 Redirects:** If the "Tennis" page is ranking for F1 because an F1 page doesn't exist, create a dedicated **F1 Results** page and link to it. If the page exists but isn't ranking, fix the internal linking structure.
 - **Impact:** improved relevance scores and lower bounce rates.

4: Strategic Market Expansion

- **The Issue:** **Italy** is your most efficient market (highest clicks, best CTR), but **English** has the most volume.
- **Recommendation:**
 - **Defend Italy:** Continue to publish high-frequency content (news, scores) to maintain dominance.
 - **Attack France:** Use the "Competitor Gap" data. For **"NBA Playoffs"**, you rank #27 in France while competitors rank #4. Create a specific French guide to the NBA Playoffs to close this gap.
 - **Impact:** Diversifies traffic sources so you aren't solely reliant on the Italian market.

5: Data Hygiene

- **The Issue:** A small percentage of data showed **Clicks > Impressions**, which is impossible.
- **Recommendation:** Audit your Google Search Console or analytics tracking setup to ensure data accuracy for future reporting.
